

## Fire Prevention Association of Nevada

in cooperation with

**International Firestop Council**

**FREE training opportunity for:**

***Firestop Inspection and Plan Review***

INTERNATIONAL FIRESTOP COUNCIL

The seminar will include building code (IBC) requirements, testing procedures, importance of a balanced approach to fire protection, and inspection procedures for passive fire protection.

Attendees will receive a printed Power Point version for future reference, and a Certificate of Completion.

The seminar includes the following topics:

What is firestopping, why is it required?	Understanding the UL fire resistance directories
IBC Code requirements (overview)	Firestop installation options
How firestop systems are tested and rated	Engineering judgments Text changes
Through-Penetration firestop systems	Special inspections and special inspectors
Membrane penetration firestop systems	Recognizing firestop installation problems
Fire resistant joint systems	Plan review and inspection process recommendations
Perimeter fire containment systems (edge-of-slab joints)	Notable changes in IBC
Duct enclosure systems	IFC-recommended firestop inspection techniques
